EXP NO:4 DATE:

### **RSA**

#### Aim:

To implement an encryption algorithm using RSA.

## Algorithm:

- Step 1: Select two large prime numbers, p and q.
- Step 2: Calculate the modulus, n = p \* q.
- Step 3: Compute Euler's totient function,  $\varphi(n) = (p-1) * (q-1)$ .
- Step 4: Choose a public exponent, e, such that  $1 < e < \phi(n)$  and  $gcd(e, \phi(n)) = 1$ .
- Step 5: Compute the private exponent, d, such that  $(d * e) \mod \varphi(n) = 1$ .
- Step 6: Convert the plaintext message into a numerical representation, usually using ASCII values or Unicode.
- Step 7: Encrypt the message by computing ciphertext, c, using the formula c = (msg^e) mod n.
- Step 8: Print the encrypted data.
- Step 9: Decrypt the ciphertext by computing the original message, m, using the formula  $m = (c^d) \mod n$ .
- Step 10: Print the original message.
- Step 11: Return 0 for successful execution and program termination.

### **Program:**

```
import java.io.*; import
java.math.*; import
java.util.*; public class
GFG {
  public static double gcd(double a, double h)
    { double temp;
  while (true) {
    temp = a % h;
    if (temp == 0)
    return h;
    a = h;
    h = temp; }
    }
  public static void main(String[] args) {
```

```
double p = 9;
double q = 5;
                double n = p * q;
              double e = 2;
                 double phi = (p - 1) * (q - 1);
                while (e < phi) {
                       if (\gcd(e, phi) == 1)
                             break;
               else
       e++;
               int k = 2;
                 double d = (1 + (k * phi)) / e;
                double msg = 12;
              System.out.println("Message data = " + msg);
              double c = Math.pow(msg, e);
       c = c \% n;
              System.out.println("Encrypted data = " + c);
double m = Math.pow(c, d);
m = m \% n;
                   System.out.println("Original Message Sent = " + m);
```

# **Output:**

```
java -cp /tmp/RgOMJoXiEh/GFG

Message data = 12.0
Encrypted data = 18.0
Original Message Sent = 29.0
=== Code Execution Successful ===
```

**Result:**
